The CloudAccess LDAP Advanced Adapter provides cloud-based, seamless integration that promotes automated provisioning, reconciliation and password management. As LDAP serves as a centralizing access hub for multiple user lists and databases that contain sensitive personal information across your enterprise, it is a mission critical requirement to best secure its credential protections and privileges. This is seamlessly achieved via CloudAccess advanced adapters and our scalable cloud-based identity management solution.

Our Advanced Adapter for LDAP acts as a trusted administrator for such tasks as creating accounts, managing Permission Sets and Profiles, and resetting passwords. This connector allows your rules and roles to fluidly integrate into the CloudAccess Identity Mgmt solution and creates a sphere of control to satisfy compliance and enforces company access policies.

Key Features
- User Security Management
- Password Management
- UserGroup Management
- Automatic role-based and group-based provisioning
- Permission Set Assignment
- Authenticate on Unique ID, PW
- Synchronize, resolve objects
- Work in parallel with AD

LEARN MORE ABOUT:
CloudIDM
..from the cloud

- Include multiple object classes for User Creation
- Update POSIX groups when User renamed, removed
- Save operational memory via block processing
- Distinguished name to authenticate to server
- Promote password self-service reset
- Default Log Entry Change filter setting

LDAP Advanced Adapter Benefits

By utilizing our LDAP Advanced Adapter or any of our vast library of integrated, cloud based application connectors, you can realize immediate results through faster deployment and our automatic provisioning capabilities. This not only eases the burdens of regulatory compliance, but significantly reduces risk, associated costs and resources. As part of an overall IAM initiative (which includes SSO), this expands enterprise visibility to maintain an end-to-end security program.

GROWING CONNECTOR LIBRARY

The CloudAccess Advanced Adapter Series includes seamless connectors and adapters to several of the key applications and platforms you need to secure.

- Salesforce.com
- SAP ECC
- AS400 (i Series)
- RACF (IBM)
- Echosign
- Samanage
- Active Directory
- Linux RedHat
- Yammer
- Box.com
- CA-ACF2
- CA-Top Secret
- GoogleApps
- AirWatch
- SugarCRM
- HP Tandem
- HP UX
- Solaris

We add several new connectors every month.
