BRIDGING ACCESS FOR MySQL: ADVANCED IDENTITY ADAPTER

The CloudAccess MySQL Advanced Adapter provides cloud-based, seamless integration that promotes automated provisioning, reconciliation and password management. As MySQL provides the gateway to a company’s cornerstone applications and its most sensitive data managing user credential protection and rights is a mission critical requirement. This is seamlessly achieved via our advanced adapters and our scalable cloud-based ID management solution.

Our Advanced Adapter for MySQL acts as a trusted administrator for such tasks as creating accounts, managing Permission Sets and Profiles, and resetting passwords. This allows for easy integration of MySQL into CloudAccess’ Identity Management solution and creates a sphere of control that meets compliance and enforces company access and usage policies.

Key Features
- User Security Management
- Password Management
- UserGroup Management
- Automatic role-based and policy-based provisioning
- Permission Set Assignment
- Authenticate on Unique ID, PW
- Synchronize, resolve objects
- LDAP, AD Interfaces

MySQL Advanced Adapter Benefits

By utilizing our MySQL Advanced Adapter or any of our vast library of integrated, cloud-based application connectors, you can realize immediate results through faster deployment and our automatic provisioning capabilities. This not only eases the burdens of regulatory compliance, but significantly reduces risk, the associated costs and resources. As part of an overall IAM initiative (which includes SSO), this expands enterprise visibility to maintain a stronger end-to-end security program.

GROWING CONNECTOR LIBRARY

The CloudAccess Advanced Adapter Series includes seamless connectors and adapters to several of the key applications and platforms you need to secure.

- Salesforce.com
- SAP ECC
- AS400 (i Series)
- RACF (IBM)
- LDAP
- Samanage
- Active Directory
- Linux RedHat
- Yammer
- Box.com
- CA-ACF2
- CA-Top Secret
- GoogleApps
- AirWatch
- SugarCRM
- HP Tandem
- HP UX
- Solaris

We add several new connectors every month Check HERE or a full list

EASY & EFFECTIVE: Simple Set Up, Configuration and Integration with IDM and SSO!

Operations supported for Group and Account Objects:
- Authenticate
- Create
- Delete
- Get
- Search
- Resolve Username
- Schema
- Test
- Sync
- Script On Resource
- Script On Connector
- Update Attribute Values

Our adapter supports:
- One Click Role-Based and/or Policy-based Provisioning to instantly set up MySQL accounts for new users—whether using on-premise or external online access.
- Self-Service List & Nickname Management so users can manage their own nicknames and email list membership to reduce IT costs.
- Robust group and account attributes to simplify integration & streamline authentication and ongoing identity maintenance
