MANAGING SECURE ACCESS FOR OFFICE 365

The CloudAccess Office365 Adapter provides cloud-based seamless integration with Active Directory or other authentication sources by validating credentials, managing passwords, and controlling access.

This connector can be deployed as a stand-alone federated single sign on (SSO) connector or in conjunction with CloudAccess' identity management solution.

This solution acts as a trusted administrator by supporting tasks as creating accounts, managing Permission Sets and Profiles, and resetting passwords. The result is the right people get to see the right application in a secure and compliant environment.

Key Features

- User Security Management
- Password Management
- UserGroup Management
- Standard AD Interfaces
- Optional integration with ID Mgmt for automated user provisioning into Active Directory
- Federated single sign on (SSO)

LEARN MORE ABOUT:

CloudIDM or CloudAM
..from the cloud
IDM + SSO: Combine the power of identity management administration and single sign on enforcement. If your organization needs to leverage IDM to provision users to Office365, our connector communicates with both Active Directory and CloudAccess IDaaS to provide user management as well as access control from a centralized, cloud-based solution.

Stronger end-to-end security

Utilizing the Office365 Adapter or any of our vast library of integrated, cloud-based application connecters, you realize immediate results through faster deployment and better access control. This eases the compliance burden and significantly reduces risk and the associated costs.

Growing connector library

The CloudAccess Advanced Adapter Series incudes seamless connectors and adapters to several of the key applications and platforms you need to secure:

- SAP ECC
- AS/400 (iSeries)
- Google Apps
- RACF (IBM)
- Active Directory
- Linux RedHat
- Yammer
- Box.com
- Salesforce.com
- LDAP
- Solaris
- HP Tandem

And hundreds of others...we add several every month
