CloudAccess’ RACF Advanced Adapter provides full enterprise support for managing RACF accounts. As the RACF platform hosts and processes some of a company’s most important applications and sensitive data, managing user credential protection and rights is a mission critical requirement. This is seamlessly achieved via CloudAccess RACF advanced adapters and our scalable cloud-based identity management solution.

Our **Advanced Adapter for RACF** acts as a trusted administrator for performing such tasks as creating accounts, managing Permission Sets/Profiles provisioning/deprovisioning users and managing, synchronizing and resetting passwords. This integration promotes a streamline and stronger management of security access for RACF and creates the necessary a sphere of control that satisfies compliance.

- HP Tandum
- HP UX
- Solaris

z/OS Voyager, Pioneer Agent
The Advanced Mainframe Voyager agent is an IBM-RACF installed EXIT, captures, audits and shares “realtime” native RACF commands to your CloudAccess identity management solution. Captures all user profile event data for reconciliation.

RACF Advanced Adapter Benefits
By utilizing our RACF Advanced Adapter or any of our vast library of integrated, cloud based application connecters, you can realize immediate results through faster deployment and our automatic provisioning capabilities. This not only eases the burdens of regulatory compliance, but significantly reduces risk, associated costs and resources. As part of an overall IAM initiative (which includes SSO), expands enterprise visibility to maintain an end-to-end security program.

GROWING CONNECTOR LIBRARY
The CloudAccess Advanced Adapter Series incudes seamless connectors and adapters to several of the key applications and platforms you need to secure. We add several every month.
